Office Action Summary

Application No.	Applicant(s)	
09/719,136	JAMES, MALCOLM BARRY	
Examiner	Art Unit	
Emmanuel S. Luk	1722	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 07 October 2002.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 18-34 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 18-34 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All   b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 31 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 30 recites the limitation "the cooling means" in lines 1 and 2. There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 18-20 and 25-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Cavazos.

Cavazos teaches a mold (12) that contains a closed chamber (14) having a liquid coolant that is vaporized, the liquid vapors are cooled by the condensing means (20), and the liquid then flow back into the liquid (Col. 1, lines 39-46). The liquid level of the chamber covers at least part of the area of the mold to be cooled and the manifold (16) holds the space above the liquid that contains the vapor of the liquid. The mold temperature is controlled via sensor (29) that sends a signal to the temperature controller, this in turn adjusts the a control valve (33) for the controlling water flow through the condenser, thus changing the reducing

Art Unit: 1722

the or increasing the cooling water flow through the condenser depending upon the difference between the temperature sensed by the sensor and the set point in the controller (Col. 2, lines 50-65).

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. Claims 21-24 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cavazos.

Cavazos teaches a mold (12) that contains a closed chamber (14) having a liquid coolant that is vaporized, the liquid vapors are cooled by the condensing means (20), and the liquid then flow back into the liquid (Col. 1, lines 39-46).

The liquid level of the chamber covers at least part of the area of the mold to be cooled and the manifold (16) holds the space above the liquid that contains the

Art Unit: 1722

vapor of the liquid. The mold temperature is controlled via sensor (29) that sends a signal to the temperature controller, this in turn adjusts the a control valve (33) for the controlling water flow through the condenser, thus changing the reducing the or increasing the cooling water flow through the condenser depending upon the difference between the temperature sensed by the sensor and the set point in the controller (Col. 2, lines 50-65).

Cavazos fails to teach heating means in the liquid the mold is a mold for molding plastic materials, the mold is a die for mold casting metals, mold is a mold for injection molding of plastic materials, and the mold is for molding by thermoforming of plastic materials.

Cavazos teaches the means for controlling the temperature in the mold via sensors and flow of cooling liquid in the condenser. The heating means is an alternative way of controlling the temperature of the water and thus the cooling of the mold by changing the rate of the evaporation of liquid to the vapor. Cavazos provides an alternative via the condensation rate of the vapor back into the liquid. It would have been obvious to one of ordinary skill in the art to have substituted one method for another in controlling the rates of either the evaporation or the condensation of the liquid or vapor because it controls the rate of heat transfer of the mold or die and thus the system can maintain the temperature desired of the mold or die.

In regards to claims 21-24, these are intended use of the mold. Cavazos clearly teaches a system for cooling a mold system, and the mold is well known for use in the shaping of materials. That the material can be metal, plastic

Art Unit: 1722

materials only depends on the material used for making the mold due to the temperatures of the molten materials. Thus, it would have been obvious to one of ordinary skill in the art to modify Cavazos with use of the mold for the various molding of materials because it is an intended use of an apparatus.

7. Claims 31-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cavazos.

Cavazos teaches two different methods for start-up of the molding process, one method is initially partially filling the system with the phase change liquid, such as distilled water, as the mold is heated up, the air is purged from the system via bleed valve (26) until moisture reaches the detector (34). The other method involves opening the valves open, heating the mold and then releasing water into the system, as it evaporates, thus starting the air purging process as the valve remains open until the moisture sensor (34) detects the presence in the evaporation path through the molds and closes the valves.

Cavazos fails to teach a method of filling the chamber with liquid and extracting a portion of the liquid.

However, Cavazos teaches alternative methods to purging the chamber of unwanted gases and filling it with the liquid and the vapor of the liquid. The methods include means that does not need the use of a vacuum and thus does not call for pumps and other extra equipment that would be needed to purge the system. It is a known alternative to have filled the chamber with water and pumped the excess water out thus creating a space having unwanted gas or

Art Unit: 1722

vapors than the vapors from the liquid. It would have been obvious to one of ordinary skill in the art to modify Cavazos by substituting the purging methods using the valves with known methods of purging the system of unwanted gas via means of pumps.

### ***Response to Arguments***

8. Applicant's arguments with respect to claims 1-17 have been considered but are moot in view of the new ground(s) of rejection. The new prior art, Cavazos addresses the claimed invention and the many issues that the Applicants have remarked over the previous prior arts.

### ***Conclusion***

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Heider et al, Kostura et al, Bloshenko et al and Waters.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Emmanuel S. Luk whose telephone number is (703) 305-1558. The examiner can normally be reached on Monday through Friday 8 to 4.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wanda L. Walker can be reached on (703) 308-0457. The fax phone numbers for the organization where this application or proceeding

Art Unit: 1722

is assigned are (703) 872-9310 for regular communications and (703) 872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0651.
